Session 107: Inter-reactions and perceptions of different realities

Summary:
The entity(s) explains that human beings, through concepts, have a limited perception, and by believing they are the center of the universe, have difficulties in accepting the existence of other realities. Further, it’s an explanation of the creation of different realities, their inter-reaction and co-existence, the way human beings perceive them and also how human beings can release themselves from them, by changing their consciousness/awareness.
